

OMEGA SMOOTH WALL SYSTEM

OMEGA
SMOOTH 6"
DOUBLE-SIDED

FACE FT. SQ. PER PALLET: SINGLE-SIDED 26.67 • DOUBLE-SIDED 24.17
ALL: 6H X 10D - 1: 12W / 8W • 2: 8W / 6W • 3: 6W / 6W • 4: 14W / 12W • 5: 12W / 12W

The #4 block is the corner or can be used as a standard wallstone.

The #5 block can be used as end of wall, vertical jumper, cut to fit the end of wall, or as a standard wallstone.

The #2 and #3 stones combine to make the same size as the #4 stone.

For more information on Omega Smooth Wall installation, visit our website.

www.CambridgePavers.com

Remove connector bags, which are packaged between the #1 and #3 stones. Identify the stone shape with ID stamped on top (i.e. #1, #2, #3...). Place stones numbers up. Connector goes on top of geogrid with “wings” into the stone below. Use one connector on each stone if possible. Start wall at corner if possible. Double-sided vertical wall can use connector when turned over.

Visit our website for more installation ideas and guides (build designs, radius' & more).

Connector Position for Vertical Alignment
(0° setback)

Connector Position for Setback Alignment
(6° setback)

Cambridge Connector Clip detail
(Patent Pending)

Gripping flanges (“wings”)

Omega wallstones used as retaining wall should be built as a setback wall. Consult an engineer wall professional for any walls over 3 feet. All vertical retaining walls must be engineered by a design professional and set on a 5 degree foundation batter.
